SINCE 1898

*Meeting Your Custom Security
Printing Needs Since 1898.*

The DT 10 is a simple, low cost, efficient, stand-alone thermal parking permit printing system. You can custom print permits in seconds with date, time, price; up to 48 permit categories and bar codes.

This Desk Top Machine is a light weight, portable printer that can be combined with a countertop display and a portable cash drawer to give you a complete selling station in a matter of minutes.

The Operator Plug (yellow) is an innovative device, which acts as both the on/off key, and the data loading unit, making permit selling a snap. With a range of features and options that allow permit sellers to select different categories, single or multiple permits and all with the press of a button.

Auditing is a breeze with the Manager Price Plug (red), which allows you complete access to a number of management functions. Through the function key you will be given a Manager's menu where you select: Audit your Seller, Reset Seller numbers for shift changes or get a complete report of the machine's activity for the day by permit category and dollar amount. Simply put — permit accounting and total management control.

Just think, with this **simple to operate** machine, you can eliminate that dead wood and custom print your permits on-demand in just seconds.

Customer wants a receipt — just push the receipt key and they have it.

A fast, complete system with tight accounting control.
KIS™ — A simple parking permit solution.
